Backend Developer

Description

The backend developer is responsible for programming new features for Hatfield Media's proprietary CMS, as well as optimizing and maintaining the current codebase. The backend developer acts as a technical referent in order to solve problems with a focus on quality, optimization, and technical performance.

The backend developer collaborates with frontend developers and designers to ensure technical consistency between the frontend and backend, while remaining in line with client objectives. You will be able to join a team of extremely talented developers, with a friendly atmosphere, in which you will be able to fully express your talents as a developer, improve yourself and help others progress.

Qualifications

Requirements

- Strong interpersonal and communication skills needed for technical communication
- Proficient skills in the following languages and markup:
    - PHP (Laravel MVC Framework)
    - SQL or equivalent database knowledge
- Proficient understanding of web-based technologies including but not limited to:
    - Browsers
    - Web portals
    - Content Management Systems
- Proficient understanding of development tools including but not limited to:
    - Version Control (Git, Github)
    - Editors or IDE (Atom, Visual Studio)
    - Command Line Interface (Powershell, Terminal)

Additional Skills (Not Required)

- Working knowledge in HTML, CSS, and Javascript
- Working knowledge with Docker and containerization
- Working knowledge of infrastructure resources in Amazon Web Services

- Working knowledge with the following software and frameworks:
  - Package managers (Composer, NPM)
  - Terraform
  - Vue (or similar responsive framework)
